- These slides: https://bit.ly/3MZEXJq
- A computer with a POSIX command prompt and some GNU tooling, i.e. (Linux/WSL/Darwin)
- Docker & docker-compose
- The mainnet-js source code git clone https://github.com/mainnet-cash/mainnet-js.git; cd mainnet-js
- Run yarn regtest:sbch:up from the mainnet-js root directory to pre-download & deploy a RegTest network stack.
- Some kind of nodejs, or python http serverlet python3 or npm i reload -g
- Browser, with Metamask installed

Mainnet Cash is a Specification First and foremost

Web3 Wallets

SEP-20 Tokens SEP20 with Minting

State of

Mainnet Cash is a tool for developers to access Bitcoin Cash

- A contract for how a service will be provided.
- Generated and enforced to the specification programmatically, to the extent practical
- The specification: api.yml
- Specifically, an OpenAPI 3 spec, implement in typescript, used in a generated express server.

Developer convenience and expediency are valued over perfection, code cleanness or symmetry.

Docker image Reg Test Stack

Javascript

Javascript

sBCH Wallets

Getting Money Sending sBCH

Web3 Wallets

SEP-20 Tokens SEP20 with

State of mainnet.cash

The mainnet-js source code contains a full RegTest Stack, deployed with docker compose.

To start a regtest stack,
from the mainnet-js source directory...
yarn regtest:sbch:up

reset everything
yarn regtest:sbch:down; yarn regtest:sbch:up

There's more in the docs.

Smart BCH has alternative documentation

Having your own private networks allow for better tests, testing in time, testing with a RegTest

Bitcoin Cash chain.

Note: the docker images for the stack took about 6 min to download over wifi.

We want to load all the most recent bundles in a browser to access the library from the dev console...

open a terminal and cd to the mainnet-js directory cd projects/mainnet-js

serve an empty app with the smartBCH bundle preloaded
python3 -m http.server -d jest/playwright/smartbch/

python3 may be called python,

npx reload or similar is fine too. The script yarn live is a shortcut

You should now have a browser console with the latest bundles on port 8000.

Simply pull mainnet-js to update versions.

If you didn't get RegTest harness working... Create a TestNet Wallet and get the deposit address:

```
const alice = await TestNetSmartBchWallet.newRandom();
//
await alice.getBalance()
// Object { bch: 0, sat: 0, usd: 0 }
alice.getDepositAddress()
// "OwE25ddbAF8DD61b 627727e03e190E32feddBD1319"
alice.toString()
// "seed:t......"
```

Save the wallet string, use it again with TestNetSmartBchWallet.fromId()

State of mainnet cash

Mainnet Cash will be here.

- The project has some remaining funds to handle maintenance.
- Currently in a feature freeze.
- Seeking **broader adoption**, and usage.
- The project is suitable for small or limited value transactions. \$0.02-\$50
- An independent security audit would be in order before the warnings are removed.

Warnings aside, mainnet-js was used for the old hop.cash and is in production on old.hop.cash.

The Future

Wallets
Getting Money
Sending sBCH

Web3 Wallets

SEP-20 Tokens SEP20 with Minting

State of mainnet cash Mainnet Cash was built to be maintained.

- Really conservative and maintenance oriented design choices from the start.
- Extensive investment in testing and a testing harness
- These values are also apparent in supporting libraries.
- Outlook
 - **@bitauth/libauth** has a nice upgrade in the works.
 - There are exiting things are happening with both SmartBCH and BCH
